

BECOME AN ARCHITECT

School Age

Supplies Needed:

- Cans, jars, boxes, etc.
- Scissors
- Glue
- Paint

What to do:

1. Have your child research, draw and then build their own home, school, hotel, or some other building.
 - May require use of a computer to find ideas and inspiration
2. Using supplies found around the house, have them bring their building to life!

Educational Benefits:

This is an easy way to incorporate math into a fun activity. Through this process children will be encouraged to measure, add and subtract, practice spatial awareness and geometry. They will also learn about basic architecture concepts such as form and function.
